

Life Goals

The diagram consists of three levels of hexagonal boxes, each representing a goal. The top level has three boxes. A horizontal line connects their bottom vertices. From the center of this line, a vertical line goes down to the top vertex of a second-level box. This pattern repeats: a horizontal line connects the bottom vertices of three boxes in the third level, and a vertical line from its center goes down to the top vertex of a box in the fourth level. The fourth level has two boxes.
